Abstract (en)
[origin: CN115748378A] The invention relates to a screed arrangement (4) for a road paver (1), comprising a base screed, a first extension screed (5) and a second extension screed (6), the first and second extension screed (5, 6) being arranged in front of the base screed (7) in a traction direction (Z) of the screed arrangement (4) and being movable relative to the base screed (7) transversely to the traction direction (Z), wherein at least one of the two extension screeds (5, 6) comprises a material deflection member (10, 10 ") configured to move paving material transversely to the traction direction (Z) of the screed arrangement (4) when the extension screed (5, 6) is stationary relative to the base screed (7), and wherein the first extension screed (5) comprises a material deflection member (10, 10 ") configured to move paving material transversely to the traction direction (Z) of the screed arrangement (4) when the extension screed (5, 6) is stationary relative to the base screed (7). Wherein the second extension screed (6) is positioned further away from the base screed (7) than the first extension screed (5) in the traction direction (Z).
