Abstract (en)

Methods and systems provide a visual user interface on a display device associated with an aircraft. A Flight Information System (FIS) broadcast report; and an Air Traffic Control (ATC) broadcast message are received. The FIS broadcast report and the ATC broadcast message are transcribed. Ownship data for the aircraft is received. The ownship data concerns at least one of: a state of the aircraft, a flight plan for the aircraft and a state of components of the aircraft. The transcribed FIS broadcast report is analyzed with respect to the ownship data to determine filtered FIS information that is relevant to the ownship. A visual user interface (UI) is rendered to be displayed on the display device. The visual UI includes the transcribed ATC broadcast message and the filtered FIS information.
