Abstract (en)
[origin: WO2021224626A1] The present disclosure relates to a method of operating an non-combustible aerosol provision system comprising control circuitry, a power source and an aerosol generator configured to generate an aerosol from an aerosolisable material, wherein the control circuitry performs the method of: causing delivery of power from the power source to the aerosol generator for an aerosol generation event in response to a user input; and determining the amount of aerosol generated from the aerosolisable material, in response to the user input, based on a determined rate of aerosol generation, wherein the determined rate of aerosol generation is adjusted based on a dynamic factor.
