Abstract (en)
[origin: WO2021222961A1] The invention relates to a dispenser, more particularly a sanitary dispenser for dispensing toilet paper or hand towel paper, for sections of a refill (2) with a material web (12) wound to form a roll, more particularly a paper dispenser, wherein the refill (2) has at least one journal (15) which can be guided along a guide path (4) of the dispenser, said guide path extending substantially in a – preferably vertical – path plane, from an insertion position (9) to a dispensing position (10) in which the refill (2) is rotatably mounted, wherein the guide path (4) has, in at least one section, a guiding bridge (22, 22a, 22b) which is oriented substantially parallel to the path plane for engagement into a circumferential groove (25) of the journal (15), said circumferential groove being designed asymmetrically with respect to an axis of rotation (13), wherein a guiding bridge (22a) is provided in the region of the dispensing position (10), and the journal (15) is held there non-rotationally and in the axial direction.
