Abstract (en)

[origin: WO2021226438A1] The present disclosure relates to a system for immune therapy, the system comprising a sample processing module configured to obtain whole blood from a subject; a cell incubation module configured to activate blood cells of the whole blood and/or introduce a vector into the blood cells of the whole blood; and a cell infusion module configured to infuse at least a portion of the whole blood to the subject, wherein the blood cells comprise CD3+ cells, NK cells, myeloid cells, and neutrophils.
