Abstract (en)

[origin: WO2021223849A1] The invention relates to polyvinyl-alcohol-stabilized (meth)acrylic acid ester polymers having particles sizes D_w of 100 to 900 nm, in the form of aqueous dispersions or in the form of powders that can be redispersed in water, characterized in that the (meth)acrylic acid ester polymers are based on a) 1 to 30 wt.% of one or more vinyl esters of carboxylic acids having 5 to 15 C atoms, b) 20 to 80 wt.% of one or more (meth)acrylic acid esters, the homopolymer of which has a glass transition temperature T_g of $\leq 20^\circ\text{C}$, c) 10 to 70 wt.% of one or more (meth)acrylic acid esters, the homopolymer of which has a glass transition temperature T_g of $\geq 50^\circ\text{C}$, and optionally one or more additional ethylenically unsaturated monomers, the specifications in wt.% relating to the total weight of the (meth)acrylic acid ester polymers.
