Abstract (en)

[origin: WO2023006581A1] The present invention relates to a method for enhancing the chemiluminescent signal of a chemiluminogenic compound in a chemiluminescent reaction mixture in a chemiluminescent reaction which comprises oxidizing the chemiluminogenic compound in the presence of an effective amount of an enhancer to obtain an enhanced chemiluminescent signal, use of a compound selected from the group consisting of quaternary amine cationic substances of formula (I) for enhancing the chemiluminescent signal of an acridinium compound, preferably an acridinium ester or an acridinium sulfonamide, in a chemiluminescent reaction, preferably in a chemiluminescent immunoassay, a related chemiluminescent composition and a related kit.
