Abstract (en)
[origin: WO2021224017A1] The present invention relates to an air treatment device, such as an air humidifier, air cleaner, air washer or the like, comprising a flush-around body around which liquid flushes, an air conduction system which is designed to feed the air to be treated to the flush-around body, and an electrostatic separator which is assigned to the flush-around body in such a manner that solid and/or liquid particles are separated out of the air which is to be treated and which approaches the flush-around body, and the separated particles enter the liquid.
