Abstract (en)
[origin: WO2021223801A1] The invention relates to an unlocking aid for simplifying a process of releasing an electrical connector from a mating electrical connector. The electrical connector comprises at least one locking mechanism, at least one housing element and at least one cable connection. The unlocking aid is brought into engagement with the locking mechanism of the electrical connector from outside the electrical connector and, by means of a connecting element, leads a gripping region to a position substantially behind the cable connection in order to release the locking mechanism.
