Abstract (en)
The present disclosure relates to an aerosol delivery component (e.g. a smoking substitute component) comprising: a first aerosolisation portion (which may be a passive aerosolisation portion) configured to generate a first aerosol from a first aerosol precursor; and a second aerosolisation portion (which may be an active aerosolisation portion) configured to generate a second aerosol from a second aerosol precursor. The component further comprises a mouthpiece portion (309) having a first outlet aperture (307) for outlet of the first and second aerosols and at least one second outlet aperture (400a, 400b) for outlet of the second aerosol. A mouthpiece cap (403) having a first cap member (404) is also provided, the first cap member (404) being moveable between a closed position in which the at least one second outlet aperture (400a, 400b) is closed, and an open position in which the at least one second outlet aperture (400a, 400b) is open.
