Abstract (en)

Disclosed is a kit of parts for forming an aerosol delivery component for a substitute smoking system. The kit of parts comprises first and second moulded component parts configured such that, when joined together, the first and second moulded component parts define an airflow passage and aerosol precursor reservoir therebetween. Also disclosed is a method of forming an aerosol delivery component for a substitute smoking system. The method comprises moulding a first component part, moulding a second component part, and joining the first and second component parts to one another such that, when joined together, the first and second component parts define an airflow passage and an aerosol precursor reservoir therebetween.
