Abstract (en)

[origin: WO2021229069A1] The present invention relates to a process for plasma treatment of a tobacco product filter material, the plasma treatment preferably being treatment with plasma effluent, a filter comprising the filter material obtainable by the process, a tobacco-vapor product comprising the filter, and the use of the filter in a tobacco-vapor product. In particular, the filter material according to the present invention and the use thereof in a tobacco product, in particular a tobacco-vapor product, allows for enhancing the user experience by removing hot steam from the first two to four puffs and/or offers a more consistent vaping experience.
