Abstract (en)

[origin: WO2021229370A1] A vehicle (1) consisting of a tractor (2) and at least one trailer (4) comprises management means (100) configured to detect an actual deceleration (a_R) for the vehicle, to calculate an expected deceleration (a_E) for the vehicle and a difference (Δa) between the expected deceleration and the actual deceleration ($\Delta a = a_E - a_R$), and to control a trailer brake master valve (70) so as to modify the pressure in the trailer brake circuit (120) in order to minimize said difference (Δa).
