Abstract (en)

[origin: WO2021228544A1] The invention relates to a device which has a sensor (8) that responds to at least one specified combustion gas. The sensor (8) is designed to be attached on or in a section (2, 6, 17) of a spinning facility such that a detection section of the sensor (8) is oriented towards a hollow chamber (2a, 6a, 16) of said section (2, 6, 17) to be detected. A spinning facility section (2, 6, 17) has the sensor (8) and the hollow chamber (2a, 6a, 16), and a spinning facility has such a spinning facility section (2, 6, 17).
