Abstract (en)

[origin: WO2021228294A1] The aim of the invention, which relates to a shielding element (1) and a plug connector (19), is to specify a solution which provides reliable shielding and by which the assembly effort and the assembly costs are reduced and savings can be made on material, weight and material costs. This aim is achieved in that a plurality of tabs (7) are situated along the circumference of the hollow cylindrical main body (2) at the second end (6) of the hollow cylindrical main body (2), and in that these tabs (7) are curved, the tabs (7) being situated so that they project at least in part radially from a longitudinal axis (3) of the hollow cylindrical main body (2).
