Abstract (en)  
The present invention provides a refrigerator capable of suppressing frost formation in an upper portion of a cooling chamber. The refrigerator 10 comprises: a storage chamber 12; a cooling chamber 115 for accommodating air to be blown to the storage chamber 12; and an evaporator 162 for cooling the air in an interior of the cooling chamber 115. In the refrigerator 10, the evaporator 162 is a finned tube cooler having a heat transfer tube 29 and heat-dissipating fins, an air passage restricting member 30 is disposed between a side wall 32 of the cooling chamber 115 and the evaporator 162 and is in contact with the evaporator 162.
