Abstract (en)  
[origin: WO2021234135A1] The present invention relates to a dispersion comprising a dispersed phase having drops and a continuous aqueous phase, preferably in the form of a gel, in which the drops have a fatty phase comprising at least one lipophilic gelling agent, in which; the fatty phase has a melting point of between 50 °C and 100 °C, preferably between 60 °C and 90 °C, and meets at room temperature and atmospheric pressure the following physicochemical criteria; a hardness (x) of between 2 and 14 N, preferably between 2.5 and 12 N, more preferably between 3 and 9 N, and especially preferably between 4 and 6 N; and a tack (y) greater than or equal to -2 N, preferably greater than or equal to -1 N, and especially preferably greater than or equal to -0.6 N; and the dispersion does not comprise amodimethicone.
