Abstract (en)

[origin: WO2021234242A1] The invention relates to a method for assembling a first metal part (12) with a second part (14) made of an organic matrix composite material, the first part (12) having a first connecting portion (12A) and the second part (14) having a second connecting portion (14B), the method comprising the steps of: - causing the first connecting portion and the second connecting portion to overlap, a through-hole (14B) of the second connecting portion opening onto the first connecting portion, - forming a protective layer (18) on the side wall (14B3) of the through-hole, - forming a seal (19A) between the protective layer and the first connecting portion, and - forming, by additive manufacturing using spray deposition of metal powder driven by a cold gas, a fastening element (20) which extends into the through-hole, is fastened to the first connecting portion and encloses the second connecting portion.
