Abstract (en)

[origin: WO2022214343A1] The invention relates to a suction device (200) for an inkjet printing device (100). Said suction device is designed to guide a printed recording medium (120) along a transport direction (1) through a constriction (202) with a counter-rotating gas flow (204) in order to be able to efficiently and comprehensively suction ink mist (170) in the transport direction (1) upstream of the constriction (202).
