Abstract (en)

[origin: WO2021233821A1] Disclosed is an adapter (100) for connecting a refill container (200) with a container (300) during a refilling process. The adapter (100) has a first open end (10) and a second open end (11). The first open end (10) and the second open end (11) are connected to an in particular peripheral wall (12). A breaking element (20) is arranged inside the adapter (100). Said breaking element (20) extends in the direction of the first open end (10) and is connected on one side via a web (21) to the wall (12).
