Abstract (en)
[origin: WO2021234297A1] The invention relates to a learning device (100) based on cards (200, 300), the learning device (100) comprising: a place (110) for accommodating at least one card (200) comprising an identification element (230); a read system (130, 132) designed to identify the identification element (230, 232); an activation system (120, 122) designed to detect an action on an interaction region (220) of said card (200); and a processing unit (160). The processing unit is configured to search, in a read mode, after detection of an action by the activation system (120, 122), for a sound recording, captured previously, associated with said identification element (230, 232), and to have the sound recording played by a sound reproduction system (150). The invention further relates to a learning kit comprising such a device.
