Abstract (en)
[origin: WO2021233541A1] The invention relates to a discharge device (10), a rail vehicle having a discharge device and a method for discharging electrostatic charge from a shaft (11), wherein the discharge device comprises a holder (13) and a conductor assembly (14), wherein the conductor assembly has at least one flexible conductor (15) arranged on the holder, wherein the conductor is formed from a carbon fibre assembly (16) and has a shaft contact section (21) for contacting the shaft, wherein the shaft can be axially applied with a contact force on an end side of the shaft via the conductor.
