Abstract (en)

[origin: WO2022008567A1] The invention relates to a digital data monitor, in particular an apparatus for monitoring the data load of a device such as a computer, projector, tablet and/or smartphone over a certain time interval and/or in real time. The data monitor proposed for the first time by the invention can be used in a very versatile way for monitoring the load of a device such as a smartphone by means of generated and/or transferred data. The information is generated from a wide variety of measurements which produce results in the form of data and is displayed by means of segments which are arranged on/in a dial.
