Abstract (en)
[origin: EP4155617A1] A temperature and humidity comprehensive adjustment control method, comprising the following steps: acquiring a thermal comfort influence parameter corresponding to a user in a working space of an adjustment device, and a preset relative humidity range (S10); determining a target temperature range according to the thermal comfort influence parameter and the relative humidity range (S20); determining a target moisture content range according to the preset relative humidity range (S30); and determining an operating parameter of the adjustment device according to the current temperature, the current moisture content, the target moisture content range and the target temperature range in the working space, and controlling the adjustment device to operate according to the determined operating parameter (S40).
