Abstract (en)

A light emitting device comprises one or a plurality of light emitting elements and a plurality of fluorescent materials, and emits a first light, a second light, and a third light from one or a plurality of light emitting elements and one or a plurality of fluorescent materials, wherein the first light has a correlated color temperature in a range of 1,500 K or more and 3,500 K or less, and has a color rendering index R9 of 50 or more, the second light has a correlated color temperature in a range of 3,500 K or more and 5,500 K or less, and has a color rendering index R9 of 50 or more, the third light has values of X and Y coordinates in the chromaticity diagram of the CIE1931 color system that are smaller than the values of X and Y coordinates at a color temperature of 5,500 K on the black body radiation locus, and a light having a correlated color temperature of 6,500 K has a color rendering index R9 of 50 or more and a melanopic ratio of 1.0 or more.
