Abstract (en)

[origin: WO2021240401A1] An vaporizable material capsule including a container wall having a volume for holding the vaporizable material, the container wall having a first opening, a movable element that is slidably attached to the container wall, the movable element having a second opening, wherein the movable element is configured to slide relative to the container wall such that in an open position, a location of the second opening at least partially matches with a position of the first opening, to form a fluidic passage for the vaporizable material via the first and second openings, and in a closed position, the location of the second opening does not match a location with the first opening to close the fluidic passage for the vaporizable material.
