Abstract (en)

[origin: WO2021239916A1] The present invention relates to a packaging material web, in particular made of paper or paperboard, in particular corrugated paperboard, wherein at least one longitudinal edge strip adjoining a longitudinal edge is provided at least in sections with a cold-sealing adhesive and has at least one folding joint extending in the longitudinal direction of the web, in particular centrally in relation to a width measured transverse to the longitudinal direction of the web, which folding joint defines a folding axis along which two longitudinal web sections connected by means of the folding joint can be folded, wherein the packaging material web is free of cold-sealing adhesive at least in sections along the folding joint.
