Abstract (en)

[origin: WO2022058078A1] The invention relates to a method for operating an electrolysis system (1) comprising an electrolyzer (2) for generating hydrogen and oxygen as product gases, the product gas streams being discharged from the electrolyzer (2). A secondary gas is mixed with at least one of the product gas streams with the goal of reducing the foreign gas concentration in the product gas stream to be treated by means of an increase of the overall volume flow.
