Abstract (en)
[origin: WO2021239391A1] The invention proposes to provide an anchor (3) with oblique serrations (9, 13) at a transition from an anchor stem (6) to an anchor head (8) and on mutually remote outer sides of the anchor head (8), said oblique serrations engaging edges on either side of a longitudinal slot of a C-profile rail (2), and engaging opposite inner faces of the C-profile rail (2), and thus causing the anchor (3) to be retained in a longitudinal direction of the C-profile rail (2).
