Abstract (en)  
[origin: WO2021244836A1] The invention relates to a cooler for cooling bulk material, in particular cement clinker, having a ventilation base (12) through which a cooling gas can flow for receiving bulk material and for transporting the bulk material in a conveying direction (F), wherein the ventilation base (12) comprises a plurality of conveyor planks (14) which are attached for movement in the conveying direction (F) and against the conveying direction (F), and a seal (16) is attached between two adjacent conveyor planks (14), said seal having at least two seal elements (34, 36) which are attached for movement relative to each other. Each of the seal elements (34, 36) has a seal profile (46, 48), said profiles interacting with one another such that a seal gap (50) is formed between the seal profiles, and the seal gap has a double or multiple U-profile.
