Abstract (en)

[origin: WO2021259442A1] The present disclosure relates to a cascode amplifier (1), CA, for amplifying an input voltage (V_{in}) to an output voltage (V_{out}), wherein the CA (1) comprises at least one circuit branch (CB1) comprising a load resistor (R_L), a first transistor (Q_1) and a second transistor (Q_2) in series to each other. The CA further comprises a feedback circuit (2) and a reference voltage generation circuit (3). The feedback circuit (2) is configured to provide a bias voltage (V_{bias}) to the first transistor (Q_1) by comparing a cascode voltage (V_{casc}) sensed at a terminal of the first transistor (Q_1) with a reference voltage (V_{ref}). The reference voltage generation circuit (3) is configured to generate the reference voltage (V_{ref}) using a voltage divider, such that the ratio between a transistor voltage (V_{cel}) of the first transistor (Q_1) and a transistor voltage (V_{ce2}) of the second transistor (Q_2) is kept constant.
