Abstract (en)

Provided is an on-press development type lithographic printing plate precursor having a support, an image-recording layer, and an outermost layer in this order, in which the image-recording layer contains a polymerization initiator, a polymerizable compound, and an infrared absorber, and a decomposition rate of the infrared absorber after storage for 8 hours in an environment at an ozone concentration of 150 ppb is 50% or less. Also provided are a method of preparing lithographic printing plate and a lithographic printing method in which the lithographic printing plate precursor is used.
