Abstract (en)

[origin: WO2021245571A1] The invention relates to a method for controlling an accessibility with respect to a plurality of compartmentalized service units related to toilet facilities, said method comprising the steps: monitoring a state of use of a first of said service units; upon detection of a change of said state of use from "not in use" to "in use" and/or vice versa; generating a signal indicative of said change; upon detection of said signal, switching accessibility of a second of said service units different from said first service unit; wherein said switching of accessibility of the second service unit occurs between at least two of a plurality of accessibility modes comprising at least two of "fully accessible", "conditionally accessible", and "inaccessible".
