Abstract (en)

[origin: CA3178581A1] The invention relates to a closure assembly (1) for a beverage container (2), at least comprising: - a lid element (3) having an opening (4); and - a closure element (5) for repeatably closing the opening (4), the closure element being disposed on the lid element (3); wherein the lid element (3) has an outside (6) and an inside (7), and the opening (4) has an opening edge (8) and an opening plane (9) formed by the opening edge (8); wherein the closure element (5) has at least a base part (10), a tab (11) and a lever element (12); wherein the base part (10) comprises a frame part (13), which is disposed on the opening edge (8) and has a window (14), and a flap (15), which is pivotably connected to the frame part (13) in order to close the window (14) and thus the opening (4); wherein the tab (11) is pivotably connected to the frame part (13) by means of a first axis of rotation (16); and wherein the lever element (12) is connected to the tab (11) by means of a second axis of rotation (17) and to the flap (15) by means of a third axis of rotation (18). The invention also relates to a method for repeatably closing an opening (4) of a beverage container (2) by means of a closure assembly (1).
