Abstract (en)

[origin: WO2021245445A1] It is a system for constructing raised floors (300), comprising a plurality of bases (100), intended to be laid on a laying surface, and a plurality of upper modular elements or modules (200), intended to be laid on said bases (100), and where between these modules (200) and said bases (100) a service cavity (400) is created for the passage of cables, cable ducts, raceways, (A) and/or for ventilation purposes. Each of said modules (200) comprises an upper part (21) and support feet (22). Each of said bases (100) comprises a raised part or cup-shaped element (10), the upper edge (12) of which is configured to support a foot (22) of one or more of said modules (200) and where said one or more modules (200) and said cup-shaped element (10) are mutually constrained. Each of said bases also comprises one or more arms (15) and/or connecting portions, removably or non-removably constrained to said cup-shaped element (10) and suited to mutually constrain two or more bases (100).
