Abstract (en)
[origin: WO2021246869A1] Door handle assembly comprising a first door handle (6) and a first spindle (14) which extends along a spindle axis (K). The spindle (14) is nonrotatably connected with the first door handle (6) and is couplable with a spindle hole of a door lock (2). The door handle assembly further comprises a second door handle (8) and a second spindle (16) nonrotatably connected therewith which extends along the spindle axis (K). An electrically operable coupling mechanism (12) is configured for, in a coupling position, connecting a second door handle (8) nonrotatably with a first door handle (6) and, in a release position, releasing the rotation of the second door handle (8) with respect to the first door handle (6). Further, a door lock (2) is described which is provided with such a door handle assembly.
