Abstract (en)
[origin: WO2021243388A1] The invention relates to a guide system (8) for guiding at least one movably mounted door leaf (4) relative to at least one fixed furniture part (7a), comprising: - at least one guide rail (9c) to be arranged on the at least one furniture part (7a), - at least one guide device (12), on which the at least one door leaf (4) can be pivotably mounted, wherein the at least one guide device (12) is mounted so as to be movable between a retracted and an extended end position along the at least one guide rail (9c), - at least one panel (11) to cover at least one end face (15) of the at least one guide rail (9c), wherein the at least one panel (11) is movable at least between a first operating position, in which the panel (11) covers, at least in parts, the at least one end face (15) of the at least one guide rail (9c), and a second operating position, in which the at least one panel (11) exposes, at least in parts, the at least one end face (15), and - at least one actuation device (18), with which the at least one panel (11) is movable at least from the first operating position into the second operating position. At least one coupling device (19) is provided, with which the at least one guide device (12) can be separably coupled to the at least one actuation device (18) in a portion of the at least one guide rail (9a) arranged upstream, preferably immediately upstream, of the extended end position, wherein the at least one actuation device (18), when coupled to the at least one guide device (12), can be entrained by the at least one guide device (12) to move the at least one panel (11) from the first operating position into the second operating position.
