Abstract (en)

[origin: WO2021245126A1] The invention relates to a method for controlling the operation of a device (1) for producing a particle foam component, wherein the device (1) comprises at least one function unit, which is controllable during its operation in respect of at least one target value, said method comprising the steps of: - choosing, on the basis of at least one selection criterion, a control parameter set from a data storage unit (6), in which a plurality of control parameter sets each comprising at least one control parameter for controlling the operation of at least one function unit of the device (1) in respect of at least one target value are stored; - applying the at least one selected control parameter set to control the operation of the device (1), in particular to control the operation of the function unit of the device (1) affected by the particular control parameter set.
