Abstract (en)

[origin: WO2021243394A1] The present invention relates to a device for controlling at least one electrically drivable or movable furniture element (1), comprising at least one main transmitter (31) for emitting at least one wirelessly transmitted signal (4), and at least one receiver (2) for receiving at least one wirelessly transmitted signal (4), wherein the at least one furniture element (1) can be controlled by means of at least one first wirelessly transmitted signal (4), wherein the at least one first wirelessly transmitted signal (4) can be transmitted from the at least one main transmitter (31) to the at least one receiver (2), characterised in that at least one auxiliary transmitter (32) which is separate from the at least one main transmitter (31) is provided, from which at least one auxiliary transmitter (32) at least one second wirelessly transmitted signal (4) can be sent to the at least one receiver (2), and the at least one furniture element (1) can be controlled by means of at least one second signal (4) transmitted from the at least one auxiliary transmitter (32) to the at least one receiver (2).
