Abstract (en)

[origin: WO2021245351A1] The invention relates to a method for discriminating a first message concerning a first application from among a set of messages concerning a plurality of applications, transmitted by a terminal device to a data server via a routing device, able to apply a processing operation to an attribute in relation to the first message, said method being implemented by the terminal device and comprising adding an attribute in relation to the first message to an information packet, said packet grouping attributes to which the processing operation is applied, applying a tag to the information packet comprising the added attribute, and transmitting the information packet comprising the applied tag to the data server.
