Abstract (en)

A lift device (10) includes a body (12) having a cylindrical shape and an elastic member (54) having an annular shape. The body includes, at an axial end thereof, a flat surface (16) configured to hold a workpiece. The elastic member is disposed on an outer periphery of the flat surface of the body, and includes an annular protruding portion (58) that protrudes beyond the flat surface of the body in an axial direction of the body. The annular protruding portion has a circular-arc-shaped cross-section. Air supplied to the body flows along the flat surface of the body and the annular protruding portion of the elastic member.
