Abstract (en)

[origin: EP4163239A1] System for unwinding and quick change of reels of a sheet product in a continuous production line, wherein two unwinding trolleys (5, 6) are used respectively in a running and reserve position, each carrying a product reel on a pneumatically tiltable shaft, wherein the pneumatic movement of the shaft brings the running reel in close contact with the reserve reel, so as to form a junction and connect the second reel to the line automatically, leading to the depletion of the inline reel or to the cutting of the tail of the inline reel.
