Abstract (en)
[origin: WO2021254862A1] The invention relates to an apparatus (1) for track machining, comprising a fastening device (13), at least one machining device (14) and at least one vibration decoupler (15a), operating between the at least one machining device (14) and the fastening device (13) and having adjustable stiffness and/or adjustable damping in order to decouple a movement of the fastening device (13) at least in part from a movement of the at least one machining device (14).
