Abstract (en)

[origin: WO2021251896A2] The present invention relates to an adapter having a first bolt operated by rotation of a first shaft and also having a second bolt, the adapter comprising - a first connector, - a second connector, - a coupler for coupling the first connector and the second connector to each other, wherein the coupler comprises a first and a second engaging member, said first second engaging member being arranged in the coupler so that a rotation in a first direction of the second engaging member is transferred to the first engaging member to cause a rotation of the first connector, whereas a rotation in the first direction of the first engaging member is not transferred to the second engaging member, and further comprising an activation unit for operating the second bolt, so that a rotation of the second engaging member in the first direction causes an activation of the activation unit.
