Abstract (en)  
[origin: CA3187285A1] The invention relates to a sabot (1) which comprises multiple sabot segments (1.1, 1.2, 1.3). The sabot (1) or the sabot segments (1.1, 1.2, 1.3) is/are characterized by having a structural design at the end (10) opposite the shooting direction such that a lower degree of flexural rigidity is achieved at said end (10), said sabot (1) preferably comprising three sabot segments (1.1, 1.2, 1.3). The sabot (1) or the sabot segments (1.1, 1.2, 1.3) have a rear part (3) as a push part and a front part (4) as a pull part. In order to optimize the shape and weight, the front part (4) and the rear part (3) have recesses (5, 6) in the sabot (1) or in the sabot segments (1.1, 1.2, 1.3). Braces (8, 9) are integrated between the recesses (5, 6) or the recesses (5, 6) are introduced between braces (8, 9).
