Abstract (en)

[origin: WO2021255493A1] Apparatuses and methods for resource allocation are disclosed. In one embodiment, a method implemented in a network node includes selecting an available resource in a transmission time interval, TTI; determining at least one set of dedicated radio bearer, DRBs, that can be co-scheduled in the selected resource; and allocating the selected resource to at least a subset of the determined at least one set of DRBs. In another embodiment, a network node is configured to select an available resource in a transmission time interval, TTI; determine at least one set of dedicated radio bearer, DRBs, that can be co-scheduled in the selected resource; and allocate the selected resource to at least a subset of the determined at least one set of DRBs.
