Abstract (en)  
[origin: EP4166244A1] A painting method provides for using a painting device (100) comprising: a handle (1), a supporting rod (2), and a cylindrical roller (6) rotatably mounted on the supporting rod (2); the roller (6) comprising an outer surface (40) from which a plurality of projections (5) in the shape of a truncated pyramid with a square base protrudes, being distributed along rows (R) and columns (C); the roller (6) being suitable for rolling over a layer of fresh paint applied to a surface of a wall or substrate, so that the projections (5) compress and reduce the thickness of the layer of fresh paint, leaving prints (7) with an irregular contour and a different shade of color with respect to a color (8) of the layer of fresh paint that has not been in contact with said projections (5) of the roller, so that the painted surface has an appearance similar to that of a fabric used for jute bags.
