Abstract (en)

[origin: WO2021260311A1] The invention relates to a monolithic or laminated glazing (1), bonded or bolted onto or through a structure (3), directly or by means of a frame (4) which clamps the glazing (1) and is itself bonded or bolted onto or through a structure (3), characterised in that at least one bolt (2) or one fraction of the adhesive (7) used interacts with a stiffening element (8) with a supporting surface located on the glazing (1) and/or on the frame (4); a method for mounting this glazing; and the application of this glazing (1) as glazing subjected to loads and for which it is desired to limit the buckling and the mass, in particular as aeronautic glazing.
