Abstract (en)  
[origin: WO2022069083A1] The invention relates to a feeder unit (01) of a sheet (06) working or processing machine, in which feeder unit a stack (09) of sheets (06) to be processed can be received, the feeder unit comprising: at least one handling tool (13), by means of which an uppermost sheet (06) of a stack (09) received in the feeder unit (01) can be transported away from the stack (09) in a transport direction (T) in a transport path connected downstream; and a blasting device (32), by means of which blast air can be applied in the region of the lateral sheet edge to sheets (06) of a stack (09) received in the feeder unit (01) on a side of the stack (09) extending vertically and in parallel with the transport direction (T); wherein the blasting device (32) is mounted in or on the feeder unit (01) so as to be shiftable in the transport direction (T) by at least one movement component; wherein the blasting device (32) is mounted in or on the feeder unit (01) so as to be shiftable transversely to the transport direction (T) along a mechanically predefined movement path by at least one movement component.
