Abstract (en)

[origin: EP3926088A1] A garment steamer has a base, a steamer head connected to the base via a hose and a pole assembly connected to the base and extending upwards. A docking assembly is provided for docking the steamer head, with a support arm and a steamer head holder for releasably supporting the steamer head. A first pivoting coupling is provided between the support arm and the steamer head holder to enable rotary adjustment of the steamer head holder orientation, without any tool. The steamer head holder can be rotated to a desired position so that the steamer head faces away from the user.
